

## **MultiplotExtractor Documentation**

Module name: MultiplotExtractor

**Description:** Accesses data created by MultiplotPreprocess, saving it to GCT files **Author:** Rachel Melamed, Christophe Benoist, Joslin Diabetes Center. gp-

help@broad.mit.edu

## **Summary**

The MultiplotExtractor module provides a user interface to save data created by MultiplotPreprocess. The user chooses which data to save, and the location to save it to. Multiple GCT files may be created and saved to that folder.

## Notes:

• This zip file should not be edited if it is to be used with the MultiplotExtractor.

Parameters:

Name Description Options

input filename A zip file created by MultiplotPreprocess.

## Platform dependencies:

Task type: Visualizer

CPU type: any OS: any Language: Java
